

Recommend For: Patients that need a little more reading and a little less distance than a regular Eagle.

The Eagle Balance is designed to make each viewing zone as good as it can be. While not having clear-above-the-180 vision like the Eagle, the Eagle Balance still has a very good distance, and offers slightly more in the intermediate and near zones. A good general purpose lens, this is a good fit when a patient wants only one pair that does a number of different tasks, such as driving, computer use, and reading.

**PRIMARY PAIR**

- Photofusion - Gray, Brown
- Drivewear

Not all colors available in all materials.

## FEATURES

### Balanced Viewing Zones

*Equal parts of every viewing zone to make a good all-purpose lens.*

### Variable Decentration

*Accomodate large frames and PDs that most other progressives can't handle.*

### Variable Inset

*Optimized near viewing area tailored to each patient.*

### Minimized Oblique Astigmatism

*Clear vision across the entire surface of the lens.*

### Lenticularization

*Minus lenses in wrap frames are no longer a problem.*

### Advanced Frame Measurements

#### Pantoscopic Tilt

*How vertically straight or tilted the frame is when worn.*

#### Vertex Distance

*Distance between eye and lens.*

#### Wrap Angle

*Degree to which the frame curves to fit the patient's face.*
