

Recommended for: Everyone

Many progressive lenses that are on the market today use lens designs that are 10 or 15 years old. This lens is a brand new design that is constantly updated with the latest technology.

If you had a top-of-the-line television from 15 years ago and compared it to even the most basic of televisions available today, there would be no comparison in which one would give you a better picture. The Eaglet offers the latest technology and optical benefits at a price point that is comfortable for both patient and ECP.

FEATURES

An Upgrade to Regular Progressive Lenses

The Eaglet focuses on giving patients a clearer distance field of vision. It also offers improvements in the intermediate and reading areas when compared to most standard progressive lenses.

Easy to Understand Prescription -- No Compensation

This lens does not modify the patient's prescription from what the ECP orders. That means that the prescription that is ordered is the one that is made. This makes it easy to understand for both the patient and the ECP.
